DESCRIPTION

JW[®]1691D is a dual-channel Linear LED driver with 500V MOSFET integrated, and the output current is set by the external resistor, between 5mA~80mA. Patented current control strategy ensures high output current accuracy while the system is simple with few external components and very low BOM cost.

Specially designed current sensing techniques help to broaden the application range, such as PWM/analog/TRIAC dimming.

JW1691D provides over temperature protection. When temperature inside chip exceeds 150°C, JW1691D decreases LED current, which can help chip cooling.

Company's Logo is Protected, "JW" and "JOULWATT" are Registered Trademarks of JoulWatt technology Inc.

FEATURES

- High-accuracy output current.
- Over temperature protection.
- No EMI issues.
- Compatible with PWM dimming, analog dimming and TRIAC dimming.
- Low BOM cost.
- ESOP8 package

APPLICATIONS

- T5/T8 series LED Lighting
- LED Ball lamp, Floor Lamp

TYPICAL APPLICATION
